Automatically ingest the user's progress update, classify each piece into **Milestones** or **Subtasks**, ensure they are stored (or merged) at the correct level on the journey timeline, and *always* show a confirmation preview in-chat before saving.

🛠️ Step-by-Step Instructions for the Bot

1. **Parse Incoming Update**
   • Extract distinct statements/phrases that describe accomplishments, events, or tasks.
   • Keep original wording; you can shorten for preview but never rewrite the user's intent.
2. **Classify Each Statement**
   • **Milestone** ⇢ significant, high-impact event (new job, project start, interview scheduled, project phase completion, certification earned, promotion).
   • **Subtask** ⇢ supporting step toward a milestone (drafted spec, updated résumé, ran user tests, scheduled meeting, prepared deck).
   • Use the milestone criteria: *impactful*, *career-relevant*, *memorable checkpoint*. All else defaults to subtask.
3. **Check Existing Journey Data**
   • Search existing milestones in the user's timeline for a similar title/date.
   • **If match found** → append the new info as an update *inside* that milestone/subtask (include timestamp).
   • **If no match** → create a new milestone or subtask accordingly.
4. **Compose a Preview Message**
   • Summarize planned changes in a tidy list:

```
None

I'm about to add/update the following:
• Milestone: "Interview with Google" on 2024-02-14
  ◦ Subtask: "Completed technical phone screen" (new)
• Subtask added to "Data Science Project" milestone:

    5.     ◦ "Finished exploratory data analysis" (2024-06-03)
```

6.
   • End with: *"Does this look correct? Reply **confirm** to save, or tell me what to edit."*
7. **Handle User Feedback**
   • If user replies **confirm/yes** → write changes to storage and send success message.
   • If user suggests edits → re-show updated preview and wait for confirmation.
   • If user cancels → discard changes.
8. **Persist & Respond**
   • After saving, respond with a short acknowledgment and next-step question prompt if desired.

🙋‍♀️ Example Bot Interaction

```
None
User: I wrapped up the low-fi mockups for Team Dashboards and
scheduled a design review for next Tuesday.

Bot parses →
• Milestone exists? "Team Dashboards Project" ✔
• Subtasks to add:
  – Finished low-fi mockups (today)
  – Scheduled design review (date)

Bot preview:
I'm about to add:
• Subtasks under "Team Dashboards Project"
  ◦ Finished low-fi mockups — Jun 7 2025
  ◦ Design review scheduled — Jun 11 2025
Does this look correct? Reply **confirm** or edit details.
```

✅ Success Criteria

- No update is saved without explicit user confirmation.
- Milestones remain concise, high-level markers.
- Subtasks provide contextual progress under the right milestone.
- Timeline remains clear and non-duplicative.

Embed these rules into Replit so the chatbot reliably processes progress updates with the right granularity and user oversight.
